

Installed in the minimum of time

are the components of the HomeTronic system thanks to the radio-controlled principle:

- No need for wiring plans or cable slits in the walls
- Ideal also for later installation in old and new buildings!

1 HomeTronic Manager (HCM 200)
Interactive central control unit with tested radio technology for time and energy control. Monitoring of up to 16 consumption measuring devices, control of 16 temperature zones and up to 32 modules for lights, shutters, etc.

2 HomeTronic radiator controllers with battery-operated servomotor for continuous control of the room temperature.

3 HomeTronic underfloor heating controller for control of the underfloor heating and radiators in 5 to 8 rooms.

4 HomeTronic room module monitors the current room temperature and sets the desired temperature.

5 HomeTronic shutter control module for infinitely variable control of shutters, venetian blinds and awnings.

6 HomeTronic light module for infinitely variable brightness control of light sources indoors and outdoors.

7 HomeTronic switch modules switch on electronic household appliances under the control of the HomeTronic Manager.

8 HomeTronic wind sensor causes awnings and venetian blinds to be retracted when winds become too strong.

9 HomeTronic brightness sensor monitors the brightness of the sun and transmits the values to the HomeTronic Manager.

10 Consumption data monitoring devices monitor the consumption of heat, water, gas and electricity and transmit the values to the HomeTronic Manager.

For the technically minded.

Leave that wallpaper right where it is!

Hometronic uses no wires. That means you don't have to do any wiring. You don't have to touch the walls. No complicated installation. No bother. No problems. Hometronic is perfect for any home, old or new.

Combined components.

The Hometronic system includes the Hometronic Manager, central thermostat and individual radiator controls, sensors, and control modules. Hometronic responds to time, lifestyle, and light programs, monitors consumption and heating costs.

High capacity.

The basic version of Hometronic can regulate the heating in up to 16 rooms, monitor energy consumption on 16 channels and control up to 32 lights, shutters, blinds and more (7 x 5 x 1.4 inc.).

Ready to work.

Hometronic comes with a built-in programme. If they match your lifestyle, you're ready to go. If they don't, it's a simple matter to adjust the settings.

Room to grow.

Hometronic is a flexible system that adapts to your lifestyle. You can get the capabilities you need right now, and add new components when you need them.

Holidays yes, worries no.

Enjoy your holidays – Hometronic's keeping an eye on things at home. It makes it look like you're there, and it even protects against emergencies. For instance, if a water pipe should burst, Hometronic can automatically shut off the main water supply.

Hometronic

- * Shows settings in plain English
- * Is CE-approved
- * Needs no wiring
- * Is easy to set up
- * Measures a compact 170 x 130 x 35 mm / 7 x 5 x 1.4 inc. (H x W x D)

You'll see it and feel it – quality of life is about being well-adjusted.

Quality of Life is a Question of Being Well-Adjusted.

More comfort, more security, lower energy costs.
At your fingertips.

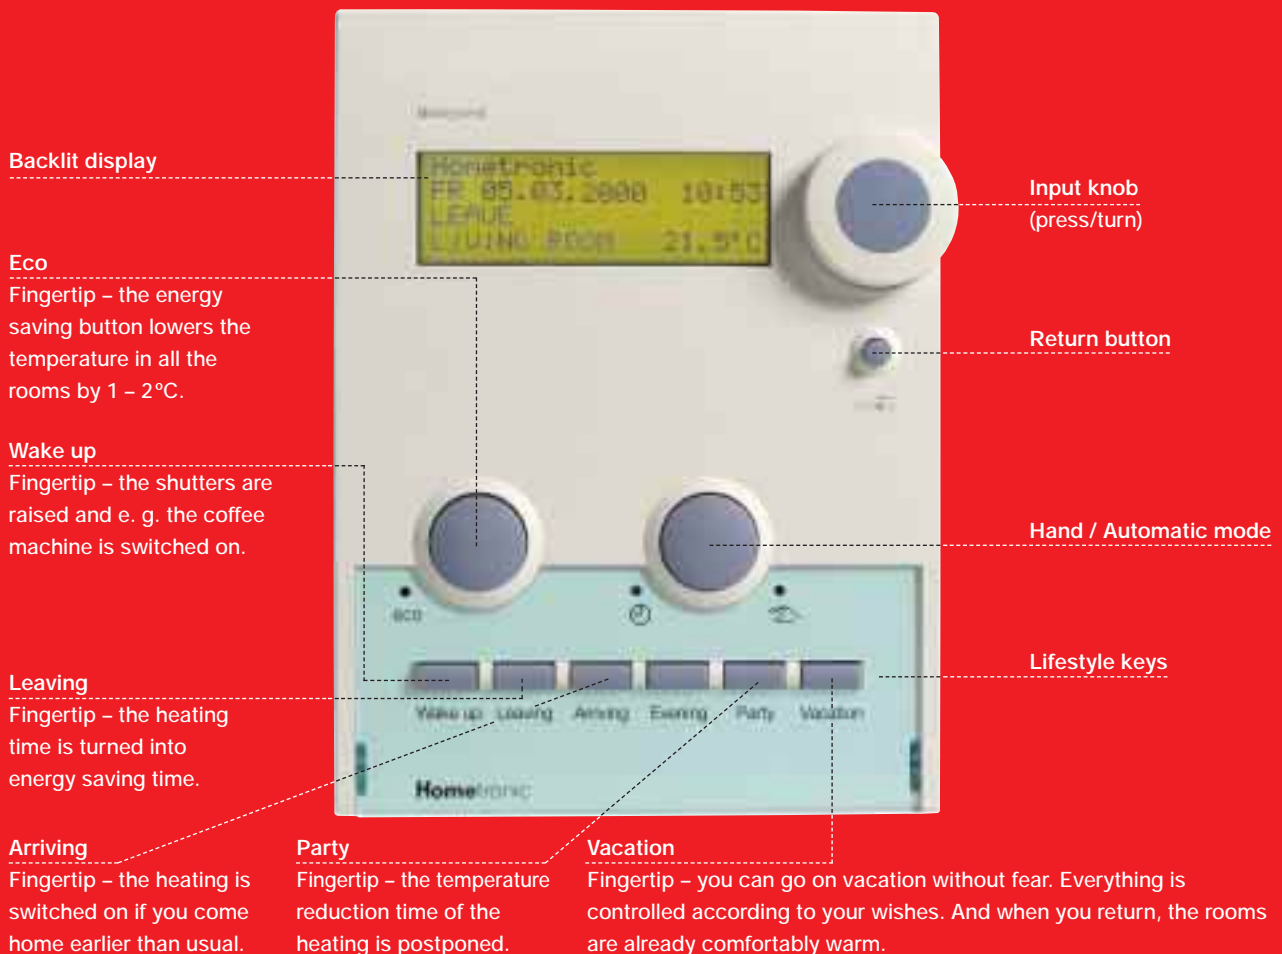

Hometronic.
Wireless home comfort technology.

Imagine a home with a mind of its own. Watchful. Aware.

You'll love it.

Life is too good and leisure time too valuable to spend it doing routine chores around the house or apartment. You can make your life more pleasant and your home safer at the same time, while automatically reducing utility bills and even helping the environment. It's easy.

Give your home a mind of its own – the new Hometronic. It can manage all your home systems. Tell it what to do, how, where, and when. And then let things just take care of themselves.

The Hometronic Manager works with any interior design – just adjust it for your daily routine and your individual preferences, and it takes care of everything. Without ever taking control away from you.

An ordinary day in an extraordinary home.

turns on lights

offers shade

has home appliances under control

controls room temperature

Up. Down.

Seven in the morning. The night is over. All over the house, the shutters go up. Or stay down, or open part way – just as you want them.

Hot. Cold.

Out of bed and onto the floor. Thanks to Hometronic it's already warm, and so is the bathroom. Of course, once everybody's out the heat in there will go off.

On. Off.

Smell the coffee. Hometronic's already turned on the coffee machine, and will make sure to turn it off after breakfast. Doesn't that first cup in the morning taste good?

Wind. Weather.

How much do those weather reporters really know? Should we take in the awnings? Who knows, and who cares? Hometronic will do it at the first sign of rain or storm.

Light. Dark.

Don't want too much sunlight on those sensitive plants in the conservatory! So if it gets too hot, Hometronic will pull down the shades.

controls awnings

saves energy

increases your security

simulates presence when absent

Home. Away from home.

Don't take any chances! Activate the security programs and have Hometronic simulate your presence with random functions.

In. Out.

While you're out the meter-reader comes by. No need for him to knock or go round the back – he can read the energy consumption with a wireless reader from your front door.

Good. Better.

High heating bills remind you to turn down the thermostat. Better yet, let Hometronic regulate the heating so it's warm where you are, when you're there.

I'm home!

You approach the door. Hometronic turns on the lights, first outside and then inside. There's nothing like a warm welcome!

Another busy day draws to a close.

The shutters go down. The lights and appliances go off. Hometronic takes care of things. You can sleep peacefully. Tomorrow will be another busy day – for Hometronic.
